Bathymetry was compiled from surveys and hydrographic data from 1939 to 1972 and ranging in scale from 1:500,000 to 1:1,000,000.
 Bathymetric contours were developed from uncorrected depths based on a 100-meter per contour interval, unless noted otherwise.
 Lack of sufficient data on portions of this map require the use of general-use bathymetric contours.
 Ship track used for offshore bathymetric control.
 Areas within which the track control is closely spaced, generally 1-1.5 km.
 This map is not to be used for navigation.

 NATIONAL OCEAN SURVEY
 1981
 BATHYMETRIC CONTOUR INTERVAL: 200 METERS
 MERCATOR PROJECTION
 Scale: 1:500,000 at 15°30' N latitude

Bathymetry was compiled in 1972 and revised in 1978 by the U.S. Naval Oceanographic Office and the U.S. Naval Ocean Research and Development Agency. It is based on the work of the following: Joseph H. Ferguson, Joseph D. Gray, Charles R. Jones, Frank L. McArthur, Robert A. Matthews, and G. Stephen Lavery. It is based on the work of the following: Fredrick H. Swenson and Joseph C. Whitney.
